AB
     Disclosed are active substance combinations comprising trifluorobutenyl
     derivs. I (X = halo; n = 0,1 or 2) and previously known fungicides. The
     active substance combinations have a very good synergistic fungicidal,
     nematicidal, insecticidal, and/or acaricidal effect.

AB
     HetSO2CH2CR1:CF2 and HetS(:0)CH2CH2CR1:CF2 [Het = (substituted) 5-6
     membered condensed heterocyclyl; R1 = H, F], were prepared by oxidation of
     HetSCH2CH2CR1:CF2 (Het and R1 as above) with a salt of H2SO5 in the
     presence of an auxiliary agent and diluent. Oxidation of
     5-chloro-2-[(3,4,4-trifluoro-3-butenyl)sulfanyl]-1,3-thiazole in MeOH with
     Oxone in H2O gave 92,2% 5-chloro-2-[(3,4,4-trifluoro-3-butenyl)sulfonyl]-
     1,3-thiazole.

$$S$$
 SCH₂CH₂CR=CF₂

Title compds. (I; R = H, F), were prepared in following steps (1) preparing ΔR F2C:CRCH2CH2SCN (II; R as above) by reacting F2C:CRCH2CH2X (R as above, X = Br, Cl, mesylate, tosylate) with M+SCN- (M+ = H, NH+, tetraalkylammonium, alkaline (earth) ion) in the presence of a reaction aid and a solvent, (2) treatment of II with H2S or salts thereof in the presence of a reaction aid and a solvent to give F2C:CRCH2CH2S(:NH)SH (III; R as above), and (3) reacting III with MeCHO, ClCH2CHO, or chloroacetaldehyde dialkylacetal in a solvent to give I. Thus, NH4NCS in EtOH was stirred with 4-bromo-1,1,2-trifluoro-1-butene for 2 h at room temperature to give 93.3% 3,4,4-trifluoro-3-butenylthiocyanate. The latter and Et3N in t-BuOMe were treated with H2S followed by stirring over night at room temperature to give 88.5% 3,4,4-trifluoro-3-butenyldithiocarbamate which was treated with concentrated HCl and 45% ClCH2CHO in dioxane followed by boiling for 4 h whereby ClCH2CHO was again added after 2 h to give 94.4% 2-[(3,4,4-trifluoro-3-butenyl)thio]-1,3-thiazole. I are important intermediates for producing pesticides.

Prepared are di- and trifluorosubstituted alkene compds. I, wherein X is H AB or F; Y is O, NR1 or S(O)m; R1 is H or C1-C6 alkyl; m is 0, 1, or 2; A,B,D and E are selected from the following: (a) A is N and B, D and E are CR2; or (b) B is N and A, D and E are CR2; or (c) D is N and A, B, and E are CR2; or (d) A and D are N and B and E are CR2; or (e) B and E are N and A and D are CR2; R2 is H, halo, NH2, NO2, CN, alkyl, haloalkyl, alkenyl, alkoxy, haloalkoxy, alkylthio, haloalkylthio, alkylsulfinyl, haloalkylsulfinyl, alkylsulfonyl, haloalkylsulfonyl, aminosulfonyl, alkoxyalkyl, alkylthioalkyl, alkylsulfinylalkyl, alkylsulfonylalkyl, alkylaminoalkyl, dialkylaminoalkyl, hydroxycarbonyl, or alkoxycarbonyl; or Ph which may be substituted with halogen, CN, NO2, alkyl, haloalkyl, alkoxy, or haloalkoxy; or a 5- to 6-membered heteroarom. ring system containing 1 to 3 heteroatoms selected from O, S and N, which may be substituted with halogen, CN, NO2, alkyl, haloalkyl, alkoxy, or haloalkoxy; n is 1, 2, 3 or 4, and their agriculturally and/or physiol. tolerable salts. I are useful to control nematodes and arachnids, and for treating, controlling, preventing and protecting warm-blooded animals, fish and humans against infestation and infection by helminths, arachnids and arthropod endo- and ectoparasites.

The title compds. [I; R1 = H, halo, alkyl, haloalkyl, cycloalkyl, alkoxycarbonylmethyl; R2 = H, halo, alkyl, alkoxyalkyl, alkylthioalkyl, carboxy, alkylaminocarbonyl, cycloalkylaminocarbonyl, dialkylaminocarbonyl, alkoxycarbonyl; n = 0-2; with the proviso that R1 and R2 do not represent hydrogen at the same time, and in case R1 represents hydrogen, then R2 does not represent halogen], useful as nematocides, were prepared Thus, reacting 5-ethoxycarbonyl-2-mercapto-4-methylthiazole with 4-bromo-1,1,2-trifluoro-1-butene in the presence of K2CO3 in MeCN afforded 65% I [R1 = Me; R2 = CO2Et; n = 0]. Seven of the prepared compds. I showed more than 90% controlling effect at 10 ppm in test for Meloidogyne spp. (soil pot test).

AB The title compds. [I; n = 0-2; R1-R3 = H, halo, alkyl, etc.; R = H, CN, halo, etc.; A = alkylene; AR = dihalomethyl, trihalomethyl, alkenyl, etc.], were prepared Thus, bromination of 2-amino-5-chloropyridine followed by reacting the resulting 2-amino-3-bromo-5-chloropyridine with O-ethylxanthic acid potassium salt, alkylation of 6-chloro-2-mercaptothiazolo[4,5-b]pyridine with allyl bromide, and oxidation of the corresponding 3-allylthio derivative with H2O2 afforded I [n = 1; R1, R3 = H; R2 = Cl; AR = CH2CH:CH2] which showed 100% control against grape downy mildew (Plasmopara viticola) at 200 ppm. A method for controlling harmful fungi, which comprises treating the fungi or the materials, plants, the soil or the seed to be protected against fungal attack and/or animal pests with an effective amount of at least one thiazolo[4,5-b]pyridine I, is claimed.

2-(Substituted thio)thiazolo[4,5-b]pyridine compds. I (Markush included) AB are prepared and used for protection of growing plants from attack or infestation by nematode, insect or acarid pests by applying the compds. to the foliage of the plants, or to the soil or water in which they are growing. The compds. are selected from the group consisting of 2-[(4,4,3-trifluoro-3-butenyl)thio]thiazolo[4,5-b]pyridine, 2-[(bromodifluoromethyl)thio]thiazolo[4,5-b]pyridine, and

2-[(difluoromethyl)thio]thiazolo[4,5-b]pyridine.

$$R_n \longrightarrow S_N \longrightarrow SQ$$

AB A method for control of helminth, nematode, insect, or acarid pests or parasites comprises contacting said pests or parasites with title compds.

[I; R = halo, NO2, cyano, alkyl, haloalkyl, alkoxy, haloalkoxy, alkylthio,

IT

haloalkylthio, etc.; n = 0-3; Q = alkenyl, haloalkenyl, cycloalkyl, halocycloalkyl, cycloalkenyl, halocycloalkenyl, (substituted) alkyl, haloalkyl]. Thus, thiazolo[4,5-b]pyridine-2-thiol, 1,1,2-trifluoro-4-bromobutane, and K2CO3 were heated in DMF at 60° for 24 h to give 64% 2-[(4,4,4-trifluoro-3-butenyl)thio]thiazolo[4,5-b]pyridine. The latter at 10 ppm reduced root-knot galling of tomatoes by Meloidogyne incognita to 0%, vs. 70% for untreated controls.

RL: AGR (Agricultural use); BAC (Biological activity or effector, except adverse); BSU (Biological study, unclassified); SPN (Synthetic preparation); THU (Therapeutic use); BIOL (Biological study); PREP (Preparation); USES (Uses)

OTHER SOURCE(S): MARPAT 129:330724

The title compound (I), is useful as an agricultural nematocide, was prepared from 2-mercaptothiazole by a multistep process involving S-alkylation with F2ClCCH2CH2CH2X (X = leaving group), hetero ring chlorination, alkyl chain dehydrochlorination and S oxidation to the corresponding sulfone. For example, refluxing a mixture of 2-mercaptothiazole, F2ClCCH2CH2CH2CH2Cl and K2CO3 in Me2CO gave 94% 2-(4-chloro-4,4-difluorobutylthio)thiazole which was chlorinated with SO2Cl2 in AcNMe2 to give 87% 5-chloro-2-(4-chloro-4,4-difluorobutylthio)thiazole. This was stirred with powdered K2CO3 in AcNMe2 and the product (86%) treated with H2O2 in AcOH to give 82% I.

AB The title compds. CF2:CXCH2CH2S(O)R (I; X represents hydrogen, halo or lower alkyl, and R represents a group OR1 or NR2R3 wherein R1, R2 and R3 are halo, cyano, nitro, OH, etc.) are prepared I are useful for controlling insect and like pests of agriculture. Thus, bis(4,4-difluorobut-3-enyl)disulfide (preparation given) was reacted with n-hexanol in the presence of K2CO3 and treated with N-bromosuccinimide to give n-hexyl 4,4-difluorobut-3-enylsulfinate. I were tested and showed good activity against spider mites.

- The title compds. represented by the general formula RS(O)nCH2CH2CH:CF2 [n AB = 0,1,2; R is a group of formulas Q - Q13 (X = 0, S), etc., wherein the S(O)mCH2CH2CH:CF2 group is at least one of R1 (when attached to a carbon atom), R2, R3, R4, R5 or R6; e.g. when R1 is attached to a carbon atom, R2, R3, R4, R5 and R6 are each independently H, optionally substituted alkyl, optionally substituted alkenyl, alkynyl, cycloalkyl, alkylcycloalkyl, alkoxy, alkenyloxy, alkynyloxy, hydroxyalkyl, alkoxyalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted heteroarylalkyl, optionally substituted aryloxy, optionally substituted arylalkoxy, optionally substituted aryloxyalkyl, optionally substituted heteroaryloxy, optionally substituted heteroarylalkoxy, optionally substituted heteroaryloxyalkyl, haloalkyl, haloalkenyl, haloalkynyl, haloalkoxy, haloalkenyloxy, haloalkynyloxy, halo, HO, cyano, NO2, NR7R8, NR7COR8, NR7CSR8, NR7SO2R8, N(SO2R7)(SO2R8), COR7, CONR7R8, alkyl-CONR7R8, CR7NR8, CO2R7, O2CR7, SR7, SOR7, SO2R7, alkyl-SR7, alkyl-SOR7, alkyl-SO2R7, OSO2R7, SO2NR7R8, CSNR7R9, SiR7R8R9, OCH2CO2R7, OCH2CH2CO2R7, CONR7SO2R8, alky1-CONR7SO2R8, NHCONR7R8, NHCSNR7R8, or an adjacent pair of R1 - R6 when taken together form a fused 5- or 6-membered carbocyclic or heterocyclic ring] are prepared Thus, a solution of 4,4-difluorobut-3-enyl thioacetate in 50% aqueous NaOH was stirred vigorously for 30 min, followed by successively adding Et 5-chloro-4-methylisoxazole in CH2Cl2 and Bu4NBr, and the reaction mixture was stirred at the ambient temperature for 3 h to give Et
 - 5-(4,4-difluorobut-3-enylthio)-3-methylisoxazole-4-carboxylate. The latter compound was saponified with a mixture of 2 M NaOH and isopropanol and acidified with 2 M HCl to give the acid 5-(4,4-difluorobut-3-enylthio)-3-methylisoxazole-4-carboxylic acid, which was treated with Et chloroformate and Et3N in CH2Cl2 at 0° and then with NH3(g) to give the amide 5-(4,4-difluorobut-3-enylthio)-3-methylisoxazole-4-carboxamide (I). I controlled 100% Tetranychus urticae (spider mite) and Myzus persicae (green peach aphid) upon contract at 100 ppm and 100% Meloidogyne incognita (root knot nematode) at 2 ppm as a drench solution to 2 wk old cucumber plants.

The title compds. [I; R1-R4 = H, (un) substituted alkyl, (un) substituted AB alkenyl, alkynyl, cycloalkyl, alkylcycloalkyl, (un) substituted aryl, etc.; X = O, S], useful as agrochem. nematicides (no data), are prepared by reacting ortho-nitro- or -nitrosophenols or substituted ortho-nitro- or -nitrosothiophenols with a reducing agent comprising an alkali metal dithionite in an alkaline reaction medium in the presence of CS2, and

acidifying the reaction mixture Thus, CS2 was reacted with 2-nitro-5-methoxyphenol in aqueous MeOH KOH solution, and the mixture reacted with

a solution of Na dithionite and KOH, producing 6-methoxy-2mercaptobenzoxazole in 89% yield.

SCH2CH2CH= CF2

The invention provides novel 2-[(4,4-difluoro-3-butenyl)thio]benzoxazoles AB and -benzothioazoles I (X = oxygen, sulfur; n = 0-2; R1-R4 = H, alkyl, haloalkyl, etc.). I have properties as fungicides, nematocides and acaricides. An example compound, 2-[(4,4-difluoro-3butenyl)thio]benzothiazole (II) was prepared in several steps. II had insecticidal activity against, for example, the aphid Myzus persicae. 160136-15-2P, 2-[(4,4-Difluoro-3-butenyl)thio]benzothiazole IT 160136-16-3P 160136-17-4P 160136-18-5P 160136-19-6P 160136-20-9P 160136-21-0P 160136-22-1P 160136-23-2P 160136-24-3P 160136-25-4P 160136-26-5P 160136-27-6P 160136-28-7P 160136-29-8P 160136-30-1P 160136-31-2P 160136-32-3P 160136-33-4P 160136-34-5P 160136-35-6P 160136-36-7P 160136-37-8P 160136-38-9P 160136-39-0P 160136-40-3P 160136-41-4P 160136-42-5P 160136-43-6P 160136-44-7P 160136-45-8P 160136-46-9P 160136-47-0P 160136-48-1P 160136-49-2P 160136-50-5P 160136-51-6P 160136-52-7P 160136-53-8P 160136-54-9P 160136-55-0P 160136-56-1P 160136-57-2P 160136-58-3P 160136-59-4P 160136-60-7P 160136-61-8P 160136-62-9P 160136-63-0P 160136-64-1P 160136-65-2P 160136-66-3P 160136-67-4P 160136-68-5P 160136-69-6P 160136-70-9P 160136-71-0P 160136-72-1P 160136-73-2P 160136-74-3P 160136-75-4P 160136-76-5P 160136-77-6P 160136-78-7P 160136-79-8P 160136-80-1P 160136-81-2P 160136-82-3P 160136-83-4P 160136-84-5P

Title compds. R1SO2OQ (R1 = (halo) C1-3 alkyl; Q = Q1, Q2, Q3; R2 = H, AB (halo) C1-2 alkyl, (halo) C1-2 alkoxy, (halo) C1-2 alkylthio, (halo) C1-2 alkylsulfonyl, (halo) C1-2 alkylsulfonyl, NC, O2N, (halo) Ph; R3 = (substituted) C1-6 alkyl, (substituted) C3-6 alkenyl, (substituted) C3-6 alkynyl, etc.; R4, R5 = (substituted) C1-6 alkyl, (substituted) C2-6 alkenyl, (substituted) C2-6 alkynyl), are prepared To NaH in DMF was added 4-(MeO)C6H4CH2SH in DMF followed by 2-chloro-6-methoxypyridine to give 2-methyl-6-[[4-(methoxyphenyl)methyl]thio]pyridine which with anisole and F3CCO2H were refluxed to give 6-methyl-2-pyridinethiol. This, K2CO3 and ClCH2SiMe3 in DMF were heated at 60° to give 2-methoxy-6-[[(trimethylsily1)methyl]thio]pyridine which in AcOH and HBr was refluxed for 2 h to which was added MeSO2Cl to give the title compound I. I at 0.55 kg/h gave 80% or higher mortality against southern corn rootworm larvae. Addnl. title compds. were prepared and tested for arthropodicidal activity. 153508-31-7P 153508-37-3P 153538-41-1P IT

AB Fifteen benzoxazoles I [R1, R2, R3 = H, alkyl, alkenyl, alkynyl, cycloalkyl, alkylcycloalkyl, halo, haloalkyl, alkoxy, alkenyloxy, alkoxyalkyl, haloalkoxy, alkylthio, cyano, nitro, amino, NR5R6, OH, acylamino, CO2R4; or R1R3 = atoms to form 5- or 6-membered ring; R4, R6 = H, C1-4 alkyl; R5 = C1-4 alkyl; n = 0, 1; provided that R1-R3 are not all H when n = 0] were prepared For example, cyclization of 2-amino-5-methoxyphenol-HCl with thiophosgene (in solution, exothermic) gave 30% 6-methoxy-2-mercaptobenzoxazole, which reacted with BrCH2CH2CF:CF2 and

Ι

Page 116

K2CO3 in Me2CO to give 59% I (R1 = OMe, R2 = R3 = H, n = 0) (II). In tests on tomato plants, II at 2.5 ppm (soil drench) gave 98% reduction of root knots from Meloidogyne incognita, and at 20 ppm gave 100% reduction of cysts from Globodera rostochiensis. I show very little phytotoxicity, and are also useful against insects and acarids (no data).

AB The title compound (I) and other heterocycles with the same trifluorobutenyl side chain, useful as nematocides at 2.5-50 ppm, were prepared by alkylation of the appropriate heterocyclic thiol with CF2:CFCH2CH2Br in the presence of such organic base as Et3N. Sixteen heterocyclic compds. including benzoxazole, benzothiazole, pyrimidine, thiadiazole, etc. were prepared and tested.

AB
     The present invention provides microfabricated substrates and methods of
     conducting reactions within these substrates. The reactions occur in
     plugs transported in the flow of a carrier-fluid. One or more inlet flows
     may be introduced to form a plug. In some embodiments of the invention,
     the inlet flows may be relatively unmixed or selectively mixed prior to
     injection into the carrier fluid. The microchannels are constructed with
     twisting, turning, and bending, with mixing, and any subsequent chemical
     reactions, occurring within the plugs due to the changing of the typical
     laminar velocity profiles as the wall geometry changes directions.
     formation of the plugs preferentially occurs at low values of the
     capillary number Cn, where Cn= U \mu/\gamma, where U=flow velocity, \mu=
     carrier fluid viscosity, and \gamma= interfacial tension.

     High photocatalytic activity was found for colloidal cadmium sulfide nanoparticles in the radical chain oxidation of
     sulfite ions by mol. oxygen in aqueous solution The kinetics of this reaction
     was studied and a mechanism was proposed, which is in satisfactory accord
     with the exptl. data.

ΔR Smart materials show a nonlinear response to a stimulus. In aqueous solution,

the reactions between Me p-tolyl sulfide and

peroxomonosulfate or m-chloroperbenzoic acid show the expected linear dependence of the logarithm of the measured rate constant on the

reciprocal temperature This constitutes Arrhenius behavior. In the presence

of

5 or 15 g L-1 of the thermoresponsive poloxamer, P104, H(OCH2CH2)27(OCH(CH3)CH2)61(OCH2CH2)27OH, which forms micelles as the temperature is increased, anti-Arrhenius behavior or hyper-Arrhenius behavior

is

observed Anti-Arrhenius behavior occurs when the organic sulfide partitions into the thermally induced poloxamer micelles while the peroxomonosulfate anion remains in the bulk aqueous phase, causing a decrease in rate. Hyper-Arrhenius behavior occurs when both the organic sulfide and the m-chloroperbenzoic acid partition into the thermally induced micelles, causing a much greater increase in rate with temperature than in the absence of poloxamer. These two different types of smart behavior of aqueous P104 are discussed.

DOCUMENT TYPE:

Journal English

LANGUAGE:

The effect of α -cyclodextrin on the kinetics of aryl alkyl sulfide oxidation by peracids was investigated by studying the following reaction series: (a) a range of aryl alkyl sulfides with three different perbenzoic acids and (b) a range of alkyl peracids and perbenzoic acids with five different aryl alkyl studies. For peracids which bind strongly to α -cyclodextrin, the observed second-order rate constant increases to a maximum with increasing cyclodextrin concentration and thereafter non-productive binding of the sulfide causes a decline in rate. Weakly binding peracids, such as peracetic acid show only a decline in rate constant with increasing cyclodextrin concentration Linear

free energy relationships reveal that transition state stabilization by one mol. of cyclodextrin shows a far greater dependence on the stability of the peracid-cyclodextrin complex than on the stability of the sulfide-cyclodextrin complex, indicating that the principle pathway for the cyclodextrin mediated reaction is that between the peracid-cyclodextrin complex and uncomplexed sulfide. Several possible mechanisms of catalysis are discussed. Transition state stabilization by two mols. of $\alpha\text{-cyclodextrin}$ was observed for those peracids which demonstrate significant 2:1 complex formation.

CODEN: JAELBJ; ISSN: 0021-891X

DOCUMENT TYPE: Journal LANGUAGE: English

The thermodn. of aqueous sulfur-water systems is summarized in the form of potential-pH diagrams, calculated from recently reported critically assessed standard Gibbs energies of formation of the species considered. There is convincing evidence from the literature that a value of pKa(HS-) = 17-19 is appropriate, whereas a value of 13 is widely accepted; hence, the higher value of 19, corresponding to $\Delta G^{\circ}f(S2-) = 120.5$ kJ/mol, was used in these calcns., rather than $\Delta D^{\circ}f(S2-) =$ 86.31 kJ/mol quoted in the main data source. Under ambient conditions, only -2 (sulfide), 0 (elemental sulfur) and +6 (sulfate) oxidation states are thermodynamically stable in water, which is predicted to be oxidized by peroxodisulfate (H2S208/S082-) and peroxomonosulfate (HSO5-/SO52-). When sulfate is excluded from the calcns. to allow for the large energy of activation/slow kinetics of its formation from sulfide, then other sulfoxy species appear on the diagram for what is then a metastable system. Similarly, if all sulfoxy species (i.e. any species with oxidation state >0) are excluded, then polysulfide ions (Sn2-, $2 \le n \le 5$) have areas of predominance at high pH, each with a narrow potential window of predominance. This information is complemented with Sn2-/HSactivity-potential diagrams at pH 9 and 14. Some species have no area of stability even on the metastable diagrams. Potential-pH diagrams are also presented for the sulfite-dithionite system (excluding elemental sulfur), and that involving peroxomonosulfate (HSO5-/SO52-) in place of peroxodisulfate (H2S2O8/SO82-).

CASREACT 116:58695 OTHER SOURCE(S):

In situ-generated dioxiranes oxidize a series of prochiral sulfides to the corresponding sulfoxides with enantiomeric excess (e.e.) ≤89%, when bovine serum albumin (BSA) is used as chiral auxiliary. The degree of enantioselectivity, as well as yield and reaction times, depend upon the nature of the dioxirane. These are compared with enantioselectivities attainable for the same transformations by using peroxomonosulfate alone, i.e., in the absence of ketone. In the oxidation of prochiral keto sulfides (wherein the carbonyl functionality serves as precursor of dioxirane) with peroxomonosulfate, optically active keto sulfoxides are isolated in satisfactory chemical and optical yield (e.e. ≤84%).

OTHER SOURCE(S):

The Baeyer-Villiger oxidation of cyclohexanone and acetophenone by

bis(trimethylsilyl) peroxomonosulfate (I) has been

reinvestigated using 180-labeling techniques. Starting with

Me3Si18O18OSO3SiMe3, mass spectrometric analyses allowed determination of the amount

of label appearing in the carbonyl and the OR moiety of the ester (or of the lactone). Cyclohexanone promotes the decomposition of I to yield oxygen gas, which was analyzed for its 180 content. Cyclohexanone, 4-heptanone, and acetone enhance significantly the rate of oxidation of 1-methylcyclohexene and trans-β-methylstyrene by I, yielding

2-methylcyclohexanone and 1-phenylpropanone from the isomerization of the initially formed epoxides. The 180-tracer results point to a mechanism involving the intermediacy of dioxiranes as the prevailing pathway.

PhSOMe and Ph2SO oxidation with HO3SOO- in aqueous AcOH is 1st order in each reactant. Electron-releasing ring substituents accelerate the oxidation and electron-withdrawing ones retard it. A fair correlation between log ki and Hammett substituent consts. is observed in the 2 series. A mechanism involving rate-determining nucleophilic attack of the sulfoxide S atom at the outer terminal peroxo O atom of HSO5- is proposed.

Expts. in a standardized rabbit model indicate that the yellow-golden stain formed on tooth surfaces during the use of SnF2 may consist of stannic sulfide. The nature of the stain, the presence of S in the sample and the effect of an oxidizing agent (peroxomonosulfate) on the stain support this view. Thus, the low pH of SnF2 causes denaturation of pellicle protein with exposure of sulfhydryl groups, which later form stannic sulfides through reactions with Sn2+ present in the prepns.

Disclosed are active substance combinations comprising trifluorobutenyl
AB
    derivs. I (X = halo; n = 0,1 \text{ or 2}) and previously known fungicides. The
    active substance combinations have a very good synergistic fungicidal,
    nematicidal, insecticidal, and/or acaricidal effect.

GΙ

Title compds. (I; R = H, F), were prepared in following steps (1) preparing AB F2C:CRCH2CH2SCN (II; R as above) by reacting F2C:CRCH2CH2X (R as above, X = Br, Cl, mesylate, tosylate) with M+SCN- (M+ = H, NH+, tetraalkylammonium, alkaline (earth) ion) in the presence of a reaction aid and a solvent, (2) treatment of II with H2S or salts thereof in the presence of a reaction aid and a solvent to give F2C:CRCH2CH2S(:NH)SH (III; R as above), and (3) reacting III with MeCHO, ClCH2CHO, or chloroacetaldehyde dialkylacetal in a solvent to give I. Thus, NH4NCS in EtOH was stirred with 4-bromo-1,1,2-trifluoro-1-butene for 2 h at room temperature to give 93.3% 3,4,4-trifluoro-3-butenylthiocyanate. The latter and Et3N in t-BuOMe were treated with H2S followed by stirring over night at room temperature to give 88.5% 3,4,4-trifluoro-3-butenyldithiocarbamate which was treated with concentrated HCl and 45% ClCH2CHO in dioxane followed by boiling for 4 h whereby C1CH2CHO was again added after 2 h to give 94.4% 2-[(3,4,4-trifluoro-3-butenyl)thio]-1,3-thiazole. I are important intermediates for producing pesticides.

Prepared are di- and trifluorosubstituted alkene compds. I, wherein X is H AB or F; Y is O, NR1 or S(O)m; R1 is H or C1-C6 alkyl; m is O, 1, or 2; A,B,D and E are selected from the following : (a) A is N and B, D and E are CR2; or (b) B is N and A, D and E are CR2; or (c) D is N and A, B, and E are CR2; or (d) A and D are N and B and E are CR2; or (e) B and E are N and A and D are CR2: R2 is H, halo, NH2, NO2, CN, alkyl, haloalkyl, alkenyl, alkoxy, haloalkoxy, alkylthio, haloalkylthio, alkylsulfinyl, haloalkylsulfinyl, alkylsulfonyl, haloalkylsulfonyl, aminosulfonyl, alkoxyalkyl, alkylthioalkyl, alkylsulfinylalkyl, alkylsulfonylalkyl, alkylaminoalkyl, dialkylaminoalkyl, hydroxycarbonyl, or alkoxycarbonyl; or Ph which may be substituted with halogen, CN, NO2, alkyl, haloalkyl, alkoxy, or haloalkoxy; or a 5- to 6-membered heteroarom. ring system containing 1 to 3 heteroatoms selected from O, S and N, which may be substituted with halogen, CN, NO2, alkyl, haloalkyl, alkoxy, or haloalkoxy; n is 1, 2, 3 or 4, and their agriculturally and/or physiol. tolerable salts. I are useful to control nematodes and arachnids, and for treating, controlling, preventing and protecting warm-blooded animals, fish and humans against infestation and infection by helminths, arachnids and arthropod endo- and ectoparasites.

The title compds. [I; R1 = H, halo, alkyl, haloalkyl, cycloalkyl, AB alkoxycarbonylmethyl; R2 = H, halo, alkyl, alkoxyalkyl, alkylthioalkyl, carboxy, alkylaminocarbonyl, cycloalkylaminocarbonyl, dialkylaminocarbonyl, alkoxycarbonyl; n = 0-2; with the proviso that R1 and R2 do not represent hydrogen at the same time, and in case R1 represents hydrogen, then R2 does not represent halogen], useful as nematocides, were prepared Thus, reacting 5-ethoxycarbonyl-2-mercapto-4methylthiazole with 4-bromo-1,1,2-trifluoro-1-butene in the presence of K2CO3 in MeCN afforded 65% I [R1 = Me; R2 = CO2Et; n = 0]. Seven of the prepared compds. I showed more than 90% controlling effect at 10 ppm in test for Meloidogyne spp. (soil pot test).

The title compds. [I; n = 0-2; R1-R3 = H, halo, alkyl, etc.; R = H, CN, halo, etc.; A = alkylene; AR = dihalomethyl, trihalomethyl, alkenyl, etc.], were prepared Thus, bromination of 2-amino-5-chloropyridine followed by reacting the resulting 2-amino-3-bromo-5-chloropyridine with O-ethylxanthic acid potassium salt, alkylation of 6-chloro-2-mercaptothiazolo[4,5-b]pyridine with allyl bromide, and oxidation of the corresponding 3-allylthic derivative with H2O2 afforded I [n = 1; R1, R3 = H; R2 = Cl; AR = CH2CH:CH2] which showed 100% control against grape downy mildew (Plasmopara viticola) at 200 ppm. A method for controlling harmful fungi, which comprises treating the fungi or the materials, plants, the soil or the seed to be protected against fungal attack and/or animal pests with an effective amount of at least one thiazolo[4,5-b]pyridine I, is claimed.

2-(Substituted thio) thiazolo [4,5-b] pyridine compds. I (Markush included) are prepared and used for protection of growing plants from attack or infestation by nematode, insect or acarid pests by applying the compds. to the foliage of the plants, or to the soil or water in which they are growing. The compds. are selected from the group consisting of 2-[(4,4,3-trifluoro-3-butenyl)thio]thiazolo [4,5-b]pyridine, 2-[(bromodifluoromethyl)thio]thiazolo [4,5-b]pyridine, and

2-[(difluoromethyl)thio]thiazolo[4,5-b]pyridine.

OTHER SOURCE(S):
    RSOnCH2CH2CF:CF2 [I; R = (un) substituted 2-oxazolyl; n = 0-2] were prepared
    Thus, HOCH2CHO was cyclocondensed with HSCN and the product thioetherified
    by BrCH2CH2CF:CF2 to give 2-(3,4,4-trifluoro-3-butenylthio)oxazole. Data
    for biol. activity of I were given.

 (0) $nCH_2CH_2CF = CF_2$ 1

Title compds. I (n = 0, 1, 2; X = halo) were prepared Thus, 4.8 g AB N-chlorosuccinimide was added to a solution of 6.75 g 2-[(3,4,4-trifluoro-3-

10518454.trn

butenyl)thio]thiazole in 60 mL CCl4, and the mixture was refluxed for 18 h to give I (n = 0, X = Cl). Oxidation of this product with m-chloroperoxybenzoic acid and with 31% H2O2 gave I (n = 1, X = Cl) and I (n = 2, X = Cl), resp. I (n = 0, 1, 2; X = Cl) showed 100-71% controlling effect against Meloidogyne incognita on tomatoes.

OTHER SOURCE(S): MARPAT 129:330724

The title compound (I), is useful as an agricultural nematocide, was prepared from 2-mercaptothiazole by a multistep process involving S-alkylation with F2ClCCH2CH2CH2X (X = leaving group), hetero ring chlorination, alkyl chain dehydrochlorination and S oxidation to the corresponding sulfone. For example, refluxing a mixture of 2-mercaptothiazole, F2ClCCH2CH2CH2Cl and K2CO3 in Me2CO gave 94% 2-(4-chloro-4,4-difluorobutylthio)thiazole which was chlorinated with SO2Cl2 in AcNMe2 to give 87% 5-chloro-2-(4-chloro-4,4difluorobutylthio)thiazole. This was stirred with powdered K2CO3 in AcNMe2 and the product (86%) treated with H2O2 in AcOH to give 82% I.

* STRUCTURE DIAGRAM TOO LARGE FOR DISPLAY - AVAILABLE VIA OFFLINE PRINT *

The title compds. represented by the general formula RS(O)nCH2CH2CH:CF2 [n AΒ = 0,1,2; R is a group of formulas Q - Q13 (X = 0, S), etc., wherein the S(O)mCH2CH2CH:CF2 group is at least one of R1 (when attached to a carbon atom), R2, R3, R4, R5 or R6; e.g. when R1 is attached to a carbon atom, R2, R3, R4, R5 and R6 are each independently H, optionally substituted alkyl, optionally substituted alkenyl, alkynyl, cycloalkyl, alkylcycloalkyl, alkoxy, alkenyloxy, alkynyloxy, hydroxyalkyl, alkoxyalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted heteroarylalkyl, optionally substituted aryloxy, optionally substituted arylalkoxy, optionally substituted aryloxyalkyl, optionally substituted heteroaryloxy, optionally substituted heteroarylalkoxy, optionally substituted heteroaryloxyalkyl, haloalkyl, haloalkenyl, haloalkynyl, haloalkoxy, haloalkenyloxy, haloalkynyloxy, halo, HO, cyano, NO2, NR7R8, NR7COR8, NR7CSR8, NR7SO2R8, N(SO2R7) (SO2R8), COR7, CONR7R8, alkyl-CONR7R8, CR7NR8, CO2R7, O2CR7, SR7, SOR7, SO2R7, alkyl-SR7, alkyl-SOR7, alkyl-SO2R7, OSO2R7, SO2NR7R8, CSNR7R9, SiR7R8R9, OCH2CO2R7, OCH2CH2CO2R7, CONR7SO2R8, alky1-CONR7SO2R8, NHCONR7R8, NHCSNR7R8, or an adjacent pair of R1 - R6 when taken together form a fused 5- or 6-membered carbocyclic or heterocyclic ring] are prepared Thus, a solution of 4,4-difluorobut-3-enyl thioacetate in 50% aqueous NaOH was stirred vigorously for 30 min, followed by successively adding Et 5-chloro-4-methylisoxazole in CH2Cl2 and Bu4NBr, and the reaction mixture was stirred at the ambient temperature for 3 h to give Et

5-(4,4-difluorobut-3-enylthio)-3-methylisoxazole-4-carboxylate. The latter compound was saponified with a mixture of 2 M NaOH and isopropanol and acidified with 2 M HCl to give the acid 5-(4,4-difluorobut-3-enylthio)-3-methylisoxazole-4-carboxylic acid, which was treated with Et chloroformate and Et3N in CH2Cl2 at 0° and then with NH3(g) to give the amide 5-(4,4-difluorobut-3-enylthio)-3-methylisoxazole-4-carboxamide (I). I controlled 100% Tetranychus urticae (spider mite) and Myzus persicae (green peach aphid) upon contract at 100 ppm and 100% Meloidogyne incognita (root knot nematode) at 2 ppm as a drench solution to 2 wk old cucumber plants.
